

Portable read-out unit NT801 with one channel

Characteristic and usage

The mobile read-out unit without integrated multiplexer is aimed at one-time measuring in terrain. The unit is equipped with the connector for connecting and measuring of one sensor DSCS. The construction without multiplexer enables the integration of more powerful batteries for better measuring in low temperatures. The unit is connected with the measuring PC that manages the measurement and evaluation of the results. Both devices can be integrated into a portable bag that facilitates the movement in the terrain.

NT801 – front panel

Technical parameters

- Sensors DSCS with internal diameter 5-240 mm can be connected
- Power is supplied by 24 V accumulator or line adapter
- Measuring PC can be connected through the interface RS232
- Range of the measurement: 10 mWb, resolution: 1 μ Wb
- Dimensions: 350x300x250 mm; weight: 5 kg
